E-mail: honsing@nus.edu.sg
Consultation Hrs: By appointment through email

Course Objective

This course has the following objectives:

- 1) provides students with an appreciation of the theories and methodologies of financial modeling.
- 2) trains students to apply finance theories to solve various problems in financial management, investments, portfolio management, and risk management.

This objective is achieved by teaching on how to design and implement financial models in the computer, with Excel as the main tool. It covers four classes of models: Corporate Finance models, Portfolio Models, Option-Pricing Models and Bond Models. It also covers simulation, some numerical methods, and VBA programming as well.

Motivation

With the increasing sophistication in financial models, and the advance in IT, finance professionals and researchers increasingly need to perform basic financial modeling and data processing using the computer on their own. Among the software used for such purposes, Microsoft Excel stands out as the default standard. Some finance professionals, for instance from investing banking, would go to the extent of recognizing Microsoft Excel as the single software that they would have to consistently use for the rest of their career. Therefore it is not only crucial to learn how to implement financial models in the computer, but especially using the advanced tools and VBA in Excel as well. This subject complement and enhances the other finance modules currently offered in the following ways:

- 1) concretizes the theoretical finance theories into implementable methods. This enhances the practical ability of the finance students.
- 2) prepares the students for financial modeling work, including model design, sourcing for data, model programming and debugging.
- 3) discusses the concept of efficiency and effectiveness when implementing financial models. This would be the only module that discusses such important perspective.

Learning Outcome

By the end of the course, students:

- learn of the four major classes of financial models and how to implement the models
- inherit a set of ready-to-go financial models which they can use in their professional or research work
- are able to design and put together financial models for analyzing and solving financial problems.
- are able to critique and improve on the efficiency and effectiveness of financial models.

Mode of Teaching

The course will be delivered as a series of 13 three-hour seminar/workshop in a seminar room. In each session, the student will go through each financial model hands-on with their computer as they are covered in class. Thus each computer needs to have

- 1) Microsoft Excel (the latest version), with the Solver add-on and Visual Basic for Applications add-on.
- 2) internet access.

Pre-requisite

ACC1002 Financial Accounting, FIN2004 Finance, and FIN3102 Investment Analysis and Portfolio Management.

(SB) Financial Modeling, by Simon Benninga, MIT Press, 4th Edition, 2014, ISBN: 978-0262027281.

Assessment

This is a 100% CA course. The weight distribution for different components is as follows:

Mid-Term	30
Final Quiz	30
Project	30
Class Participation	10
Total	100

Group Project

Students shall form into groups of five to work on a group project. The project shall involve valuing a listed company using fundamental analysis (covered in lesson 3). It consists of 5 parts. Part 1 values the company using a simple Pro Forma, calibrated to obtain the current market price. Part 2 values the company using the by parts methodology. Part 2a calibrates the model to obtain the current market price, while part 2b implements the group's fundamental analysis conclusions to obtain a target price. The group then presents a buy/sell/hold recommendation. The deadline for parts 1 and 2 is the Friday 12pm noon on the 8th week. Part 3a studies the drivers of the business model and structure the fundamental analysis based on the drivers. Part 3b implements the beliefs of the "MD" to obtain the buy/sell/hold recommendation required by the "MD". Part 4 does sensitivity analysis and simulations by varying the drivers to perform risk analysis on the stock price. Part 5 presents a group feedback on the course. The deadline for parts 3, 4 and 5 is the Friday 12pm noon of the reading week.

Mid-Term Quiz

Date: Lesson 7 (In Class)

The mid-term quiz will be a 2 hour closed-book practical test. This quiz covers lessons 1 to 6. It will be held during class hours. Students are to make sure that they are available to sit for the mid-term.

Final Quiz

Date: Lesson 13 (In Class)

The final quiz will be a 2 hour closed-book practical test. This quiz covers lessons 7 to 12. It will be held during class hours. Students are to make sure that they are available to sit for the final quiz.

Other points to note

- **Attendance:** Since this is a 100% CA course, students must not miss more than 2 classes (not including absence due to medical (accompanied by medical certificates) or compassionate reasons). Violators will be heavily penalized or may even fail the entire module.
- **CA Attendance:** Students who miss any CA component will receive zero marks for that particular component. Absentees due to medical (accompanied by medical certificates) or compassionate reasons may be given a substitute form of assessment.
- Students are encouraged to always feedback to the instructor comments and suggestions that may help the class to learn better.
- Students are to check the Canvas frequently for announcements.
- Please use the forum in Canvas exclusively for students' discussions
- Please use NUS e-mail for e-mail communications

Academic Honesty & Plagiarism

Academic integrity and honesty are essential for the pursuit and acquisition of knowledge. The University and School expect every student to uphold academic integrity & honesty at all times. Academic dishonesty is any misrepresentation with the intent to deceive, or failure to acknowledge the source, or falsification of information, or inaccuracy of statements, or cheating at examinations/tests, or inappropriate use of resources.

Plagiarism is 'the practice of taking someone else's work or ideas and passing them off as one's own' (The New Oxford Dictionary of English). The University and School will not condone plagiarism. Students should adopt this rule - You have the obligation to make clear to the assessor which is your own work, and which is the work of others. Otherwise, your assessor is entitled to assume that everything being presented for assessment is being presented as entirely your own work. This is a minimum standard. In case of any doubts, you should consult your instructor.
