

Course Outline

Course Code : DAO1704X

Course Title: Decision Analytics using SpreadsheetsClass Date: From 15/1/2024To 19/4/2024Semester: Semester 2, Academic Year AY2023/24

Faculty : Dr Yi-Liang Tung
Department : Analytics & Operations
Email : biztyl@nus.edu.sg

URL: https://bizfaculty.nus.edu.sg/faculty-details/?profId=453

Telephone : 65161060

Overview

We are now at the era of big data. Companies are able to collect a tremendous amount of data, very often more than necessary, with ease. "Information is Power" is no longer valid if companies are not able to make correct decisions timely in terms of the data available. The use of business analytics for modelling and decisions represents the future of best practices for the success of tomorrow's companies.

This course prepares students with theory and skills to capture business insights from data for decision making using Spreadsheets. Practical examples and cases with rich data are used to stimulate students' interest and foster their understanding of the use of Business Analytics in management or business fields.

Module Objectives

Students are expected to become proficient in the extensive use of Spreadsheets in the business environment. This course will enable students to consider the data dimension in making decisions at all levels in the organizational settings.

Assessment

Assessment Components	Weightage
1. Project Report (Group)	15%
2. Class Participation (Individual)	15%
3. Quizzes (Individual)	15%
4. Assignments (Individual)	15%
5. Final Exam (Individual)	40%

Schedule and Outline

Lesson/	Session
Week	(lesson summary or outline / learning objectives / preparation / cases & assignments / follow-up readings & resources)
1	Introduction to the course
2	Introduction to Linear Optimization
	Formulate a Linear Programming (LP) mathematical model

	Solve the optimal solution of an LP using Excel solver Connector of linear antimization.
	Geometry of linear optimization Sensitivity Analysis and Shadayy Prises in Linear Optimization
3	Sensitivity Analysis and Shadow Prices in Linear Optimization
	Explain what are shadow prices
	Understand allowable increase and decrease
	Interpret a sensitivity report
4	Introduction to Discrete Optimization
	Construct binary constraints
	 Logical constraint formulation
	big-M notation
5	Public Holiday – Lunar New Year
6	Discrete Probability Distributions
	Differentiate between Binomial and Poisson distributions
	Solve questions involving discrete probability distributions
	Apply Excel's probability functions to compute the required probabilities
7	Continuous Probability Distributions
	5.00
	Differentiate between discrete and continuous probability distributions
	Solve questions involving continuous probability distributions Apply Excel's probability functions to compute the required probabilities.
	Apply Excel's probability functions to compute the required probabilities Introduction to Simulation Modelling Introduction to Simulation Modelling
8	Introduction to Simulation Modelling
	Use Excel to simulate a variety of random variables
	Carry out Simulation to analyse business decision problems
9	Case Studies on Simulation Modelling
10	Joint Probability Distribution
	The concept of joint probability distributions
	Covariance and correlation
	A sum of random variables
11	Decision Trees
	Illustrate a decision tree and its power in decision making
	Use decision tree to make business decisions under uncertainty
12	Case Studies on Decision Trees
13	Review
_	

<u>General Guide & Reading</u> (e.g. Case preparation guide, project report guide, main textbook & supplementary materials, etc)

Textbook:

AE Business Analytics: Data Analysis & Decision Making, 7th Edition

S. Christian Albright, Wayne L. Winston

ISBN-13: 9789814878180 | ISBN-10: 9814878189

Lecture notes and Teaching Videos

Academic Honesty & Plagiarism

Academic integrity and honesty is essential for the pursuit and acquisition of knowledge. The University and School expect every student to uphold academic integrity & honesty at all times. Academic dishonesty is any misrepresentation with the intent to deceive, or failure to acknowledge the source, or falsification of

information, or inaccuracy of statements, or cheating at examinations/tests, or inappropriate use of resources.

Plagiarism is 'the practice of taking someone else's work or ideas and passing them off as one's own' (The New Oxford Dictionary of English). The University and School will not condone plagiarism. Students should adopt this rule - You have the obligation to make clear to the assessor which is your own work, and which is the work of others. Otherwise, your assessor is entitled to assume that everything being presented for assessment is being presented as entirely your own work. This is a minimum standard. In case of any doubts, you should consult your instructor.
